

PRODUCT DATA

AES-2187F BOILER WATER ALKALINITY BUILDER

DESCRIPTION AND USE

AES-2187F is a concentrated alkalinity builder for the treatment of boiler systems supplied in liquid form. The product concentration has been adjusted to optimize freeze protection while providing the maximum alkalinity adjustment per pound of product available. It is recommended for use in any boiler system requiring additional alkalinity to assure proper reactions occur in the boiler water. The product will not add additional carbon dioxide to the steam produced.

CHEMICAL FEEDING AND CONTROL

AES-2187F is normally mixed in a chemical feed tank with other treatment chemicals. Steel, stainless steel or plastic may be used in the chemical feed system. However, copper, copper alloys and aluminum must be avoided.

AES-2187F is normally controlled by an alkalinity test on the boiler water. Control ranges can vary widely depending upon both makeup water characteristics and system operating conditions and will be specified by the technical representative servicing the facility.

TYPICAL PROPERTIES

Appearance: Clear colorless liquid
Odor: Odorless
Specific Gravity: 1.18-1.22
Flash Point: None
pH (undiluted): 12 -14
Freeze Point: 2°C(35°F)
(All values approximate)

SAFETY AND HANDLING

Do not take internally. If ingested, drink at least two (2) glasses of water and get medical attention. DO NOT induce vomiting. Contact with eyes causes severe irritation or burns and possible blindness. If eyes are contacted, immediately flush with clear water for 15 minutes and get medical attention. For skin contact, wash with soap and water. For additional information, see the Material Safety Data Sheet provided with this product.

PACKAGING

AES-2187F is packaged in 200 and 25 liter (nominal volume) plastic drums.
