

29th September 2008

Subject: Work Completion Certificate

Purchase order No / Contract number: IISP001A and IISP001B

Client: AlZubayr Petrochemical Complex - SCPI Basrah / Iraq

Project: EPC Contract for RO Plant (24,000 CuM/Day) Revamp

To Whom It May Concern

This is to certify that AES Arabia Ltd, has successfully completed all activities related to the above referenced contracts and handed over the project to our entire satisfaction, according to exact project specifications.

The UK Department for International Development (DFID), was responsible for financing the project in cooperation with UNICEF and managed the contract through final handover stages.

AES scope included EPC work comprising of: design, fabrication, procurement, installation, testing, commissioning, training as well as dismantling and replacement of RO modules, piping, valves, instruments, control valves, chemical injection skids, transfer pump stations, SCADA / HMI and complete upgrade of control systems.

AES performance was most satisfactory, demonstrating a professional approach to the highest international standards in project and logistics management and a good attention to detail, problem solving and various technical matters despite challenging site conditions and the difficult security situation.

It was a pleasure working with AES throughout the project. We have no hesitation to work with or recommend AES for similar projects any where.

For and on behalf of DFID,

Mr Angus Jackson

Project Manager / Team Leader
