### AES-A-336 CLOSED SYSTEM INHIBITOR

#### DESCRIPTION AND USE

AES-A-336 is a highly concentrated liquid blend of alkaline buffers, nitrite, and an azole yellow metal corrosion inhibitor. It is specifically formulated for the treatment of closed recirculating water systems constructed of multiple metallurgy. The product is used in both low and high temperature systems as well as low pressure boiler systems with limited makeup water. It may be used with either hard or soft water makeup and is compatible with glycol antifreezes.

#### CHEMICAL FEEDING AND CONTROL

AES-A-336 is normally shot fed to the system to establish the desired treatment concentration. For most systems, either a shot or bypass feeder is usually used. In case, Color changes of the product cannot be excluded the effectively will however not impaired. Treatment control may either employ the nitrite or sodium nitrite test; whichever is more convenient for the plant. Treatment control ranges vary depending upon the system being treated and will be specified by the technical specialist servicing the facility.
