### AES-A-340T COOLING WATER CORROSION & SCALE INHIBITOR

#### DESCRIPTION AND USE

AES-A-340T is designed as a corrosion inhibitor for open, recirculating cooling water systems. This product contains a synergistic blend of ortho phosphates and zinc. The synergistic blend of anodic and cathodic inhibitors assures optimum corrosion control for systems operated with makeup water containing moderate concentrations of hardness and alkalinity. AES-A-340T is compatible with all products including chlorine at use level concentration.

#### CHEMICAL FEEDING AND CONTROL

AES-A-340T is normally fed continuously to the systems being treated. However, shot feeding may be satisfactory in some circumstances. The product may either be fed neat directly from the shipping container or mixed in a chemical feed tank. Normal materials of construction are satisfactory for the chemical feed system: however, copper, copper alloys and aluminum metallurgy must be avoided.

AES-A-340T is normally controlled by an orthophosphate test utilizing a simple color comparator for measurement. The specific control ranges vary depending upon system conditions and will be specified by the technical representative servicing the facility.

#### SAFETY AND HANDLING

AES-A-340T may be toxic by ingestion. Do not take internally. If ingested, drink at least two glasses of water and get medical attention. Contact with eyes causes severe irritation or burns and possible blindness. If eyes are contacted, immediately flush with clear water for 15 minutes and get medical attention. For skin contact, wash with soap and water. For more information, the Material Safety Data Sheet is available on request.
